

Pulverizing Eggshells

Materials:

Mortar and Pestle, eggshells,
two small bowls.

In one of the small bowls collect rinsed eggshells.

Place $\frac{1}{2}$ an eggshell into the Mortar.

With the Pestle, gently break the eggshell and make circular motions around the mortar to grind the eggshell into a powder. Repeat this step until all shells have been ground into a fine powder.

Pour into second bowl.

When the work is completed, place all materials on tray.

What can I do with the powder?

Sprinkle the eggshell powder into your garden for extra nutrients!
